Research

I'm interested in identifying and describing inequalities in social systems such as in health, education and careers, and informing policy decisions that address those inequalities. My PhD research is broadly focused on quantifying barriers to and retention within the scientific and technical workforce for historically excluded populations. I enjoy using a diverse range of data science and social science methods to conduct large-scale, interdisciplinary administrative, survey, network, and text analyses, which often reveal patterns not visible at a smaller scale. My work is also informed by previous research and industry experience in machine learning, AI for social good, computer vision and natural language processing.

Work in Progress

The earnings gap in academia
Leading a collaboration with the U.S. Census Bureau Center for Economic Studies to link faculty employment records with detailed restricted-use demographic and earnings information over time to study earnings gaps in academia across gender, race, parenthood, and institution.

Mapping U.S. education pathways to scientific and technical careers
As the thesis for my education policy degree, I am leading a data linkage project with restricted-use data from the U.S. Census Bureau and college and careers data from the National Center for Science and Engineering Statistics to measure how access to STEM careers differs for students from different geographic and demographic backgrounds, and for those who took different educational pathways to their jobs.
